

Pages 1-10 Notes:

- Set on Mars, led by Sister Zina, president of the Relief Society. Mars has a fragile colony primarily composed of women, with a diminishing male population.
- Sister Zina receives a vision regarding a blizzard, a Marsian storm with no snow but extreme temperature drops. The storm wipes out the men who had gone on a mission to build a temple.
- The remaining population includes 31 men, 24 boys, and over 300 women and girls, and the community fears extinction.
- Sister Zina leads an expedition to retrieve the bodies of the lost men, but their reproductive organs are preserved in a cryochamber by the Relief Society to ensure the possibility of future generations.
- Technology on Mars has evolved, using Martian bamboo (a plant-like, metal-absorbing organism) for manufacturing.
- Sister Zina's spiritual guidance and engineering skills are central, as she creates a perfect sphere to preserve the reproductive organs, showing the intertwining of science and faith.

Pages 11-20 Notes:

- Tension within the colony is rising as more men are lost, and the women must consider ways to preserve their future.
- Sister Zina works closely with Sister Charlise, a young but talented engineer, to innovate new methods for survival.
- The death of Sister Andrea's husband is devastating, and Zina comforts her, but there is pressure on the women to take drastic measures to ensure the colony's continuation.
- The Relief Society is not only a religious organization but also the scientific and engineering powerhouse of the colony, tasked with creating new ways to sustain life.
- Sister Zina struggles with her role as a prophetess, feeling the weight of her responsibility.

Pages 21-40 Notes:

- Discussions arise about the significance of saving the remaining male organs, as they are the key to future reproduction.
- A debate begins about what role the women must play in order to ensure survival, and Sister Zina reflects on the pressures of leadership in such a high-stakes situation.
- The relationship between faith and science continues to be explored, with Sister Zina leading the way as both a religious figure and a scientist.
- Sister Juanita begins questioning Zina's decisions, adding tension to the community dynamics.
- A cryochamber is built to store the remaining male reproductive organs, but there is doubt and uncertainty about the future of the Marsian colony.

- All three of Sister Andrea's daughters were born and healthy and, three weeks after leaving the artificial womb, normal human children.
-
